Grassland Management School participants will benefit from classroom and extensive field sessions with local and regional practitioners

The SD Grassland Management School is designed to be complimentary to the SD Grazing School and the SD Soil Health School; and will expand on specific grassland management topics often not adequately covered in those courses.

This school builds upon the principals of grazing management and soil health, while offering step by step instruction on the basics of grassland ecology through planning, establishing, maintaining, or rejuvenating a variety of planted and native grasslands.

Classroom sessions will be supported by extensive field visits where students will have the opportunity to see multiple grasslands in various states of health and a variety of management techniques.

This is a hands-on school designed for landowners and professionals alike.

The mission of the South Dakota Grassland Management School is:

To provide the means to restore, measure, manage, and add ecological and economic profit to all types of grasslands through a holistic approach.
